F FRANC

PRODUCT CONCEPT PROPOSAL

# Career Pulse

An AI-assisted career check-in that understands how a student feels about their career journey and guides them to the most useful next step in Franc.

**Core recommendation**

Position Career Pulse as Franc's personalization and routing layer. It should help a student identify their current career state, receive one clear action, and move directly into the right Franc service.

### Fast

A guided check-in that takes about two minutes.

### Supportive

Warm language that reduces uncertainty and encourages action.

### Personalized

Recommendations based on the student's answers and context.

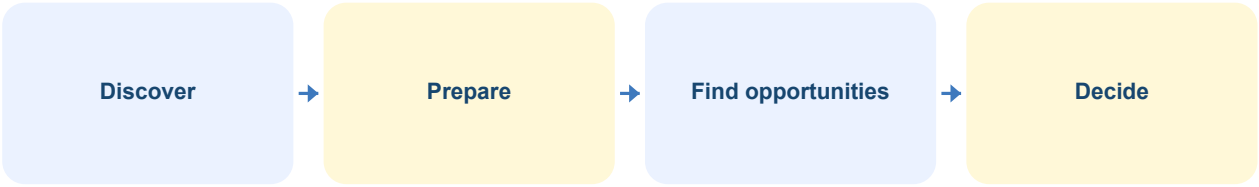

### Connected

Routes users into Franc's existing career services.

Prepared for Franc - Antonine University Career Support

# 1. Strategic fit

Franc already supports career discovery, preparation, opportunity search, and decision-making. Career Pulse becomes the intelligent front door that helps each student decide where to begin.

## Why it belongs in Franc

### Solves the starting-point problem

Students often know they need career help but do not know which service or task matters first.

### Extends Franc's personality

The concept matches Franc's friendly, encouraging, student-focused tone.

### Creates service continuity

A check-in can connect discovery, application preparation, interview practice, and job decisions.

### Builds useful progress signals

Optional repeat check-ins can show how confidence, clarity, and readiness change over time.

## Recommended positioning

| | |
|---|---|
| **Career Pulse** | Answer a few quick questions. Franc understands your current career state and recommends the best next step. |

## Where users should find it

+ Place a prominent 'Not sure where to begin?' prompt above the service catalogue.
+ Offer the check-in from Franc's career chat when a user expresses confusion or uncertainty.
+ Invite users to check in again after completing a major service or career milestone.

| | |
|---|---|
| **Naming guidance** | Use 'Career Pulse' or 'Career Check-In.' Avoid 'Mood Detector': Franc is helping the student reflect and choose an action, not making a mental-health diagnosis. |

# 2. Student experience

The interaction should feel lighter than an assessment and more useful than a generic chatbot response. A student should leave with a clear explanation, one primary recommendation, and one small action they can complete today.

## Suggested question set

| Area | Example statement | Response |
|---|---|---|
| Clarity | I know what career direction I want to pursue. | 1 to 5 |
| Confidence | I feel confident about my next career step. | 1 to 5 |
| Energy | I have enough energy to work on my career today. | 1 to 5 |
| Readiness | I feel prepared to apply for opportunities. | 1 to 5 |
| Pressure | I am worried about making the wrong career decision. | 1 to 5 |
| Focus | I know which career task I should focus on first. | 1 to 5 |
| Momentum | I have made career progress recently. | 1 to 5 |
| Context | What is the biggest career challenge on your mind? | Optional text |

## Result format

**Your Career Pulse: Preparing, but uncertain**

You appear motivated to move forward, but you may need more confidence in your application. Start with Resume Feedback, then use Mock Interview. Your action for today: upload your current CV and improve the three areas with the biggest impact.

# 3. Career states and service routing

The result should describe a practical career state. It should never label the user with a medical or psychological condition. Each state should connect directly to an action Franc can support.

| Career state | What the answers suggest | Recommended Franc path |
|---|---|---|
| Exploring | Low clarity with curiosity or willingness to learn. | Personality Test; Values and Interests |
| Confused | Several possible directions and difficulty choosing. | Career Chat; Job Comparison |
| Preparing | A goal exists, but application materials need work. | Resume Feedback; Cover Letter Feedback |
| Nervous | The next opportunity is clear, but confidence is low. | Mock Interview; Career Quest |
| Stuck | Low momentum and uncertainty about the first action. | Career Chat with a short action plan |
| Ready | High clarity, confidence, and willingness to act. | Job Matching; Career Quest |
| Overloaded | High pressure, low energy, or too many competing tasks. | Prioritized micro-plan before another service |

## Recommendation design rules

### One primary action

Name the single highest-value next step. Too many choices can recreate the confusion the service is meant to reduce.

### One secondary option

Offer a useful alternative when the student is not ready for the main action.

### Explain the reason

Connect the recommendation to the student's answers using supportive, plain language.

### Make it actionable

Deep-link into the recommended service and preserve relevant context when possible.

# 4. AI and decision approach

**Recommended architecture**

Use a transparent scoring model to identify the career state, then use AI to interpret optional text and write the personalized explanation. This keeps results consistent while preserving Franc's conversational personality.

## What the scoring layer should do

+ Convert 1-to-5 responses into dimensions such as clarity, confidence, energy, readiness, pressure, focus, and momentum.
+ Apply documented thresholds and combinations to identify a primary state and, when useful, a secondary state.
+ Return a service route from an approved mapping table.
+ Store a version number with each result so future scoring changes remain traceable.

## What the AI layer should do

+ Summarize the optional free-text response without changing the scored state on weak evidence.
+ Write an empathetic explanation using Franc's warm, student-friendly voice.
+ Personalize the recommended action using the student's immediate context.
+ Stay within approved career-support guidance and avoid diagnostic language.

## High-level product flow

### Minimum data object

Check-in ID, date, dimension scores, primary state, optional secondary state, recommendation, completion status, and scoring version.

### Tracking view

A simple private timeline such as Overloaded -> Exploring -> Preparing -> Ready, with dates and completed actions.

### Fallback behavior

If AI generation fails, show a reviewed template for the scored state so the student still receives a useful result.

### Quality control

Test identical answer sets for stable classification and review generated copy for tone, accuracy, and unsafe claims.

# 5. Trust, rollout, and success

## Trust and privacy requirements

+ Tell students what is collected, why it is used, and whether it will be saved before the check-in begins.
+ Make history optional and give users a clear way to delete individual check-ins or their full history.
+ Do not infer mood from the camera, microphone, browsing behavior, or unrelated activity.
+ Keep the service focused on career support. Do not present results as mental-health advice or diagnosis.
+ Define a reviewed support response for messages that indicate immediate personal danger or crisis.

## Recommended launch plan

| Phase | Scope | Decision gate |
|---|---|---|
| 1. Prototype | Static question flow, rule-based states, reviewed result templates, no history. | Do students understand and trust the result? |
| 2. Pilot | AI-written explanations, optional text, deep-links to services, limited student group. | Do recommendations lead to useful service starts? |
| 3. Tracking | Consent-based history, progress timeline, repeat check-ins, reminders. | Does tracking improve follow-through without creating pressure? |

## Success measures

+ Check-in completion rate and average completion time.
+ Percentage of users who start the recommended Franc service.
+ Percentage who complete the recommended action.
+ Student rating of whether the result felt accurate, useful, and respectful.
+ Repeat check-in rate and movement in clarity, confidence, or readiness.

## Ready-to-use service card

**Career Pulse | Button: Check My Pulse**

How are you feeling about your career today? Let Franc understand your current state and recommend your best next step.

**Career Pulse should launch first as a short, transparent career check-in. Its strongest business value is helping every student enter Franc through the right door and increasing meaningful use of the services Franc already provides.**
